

LiveTiles MX

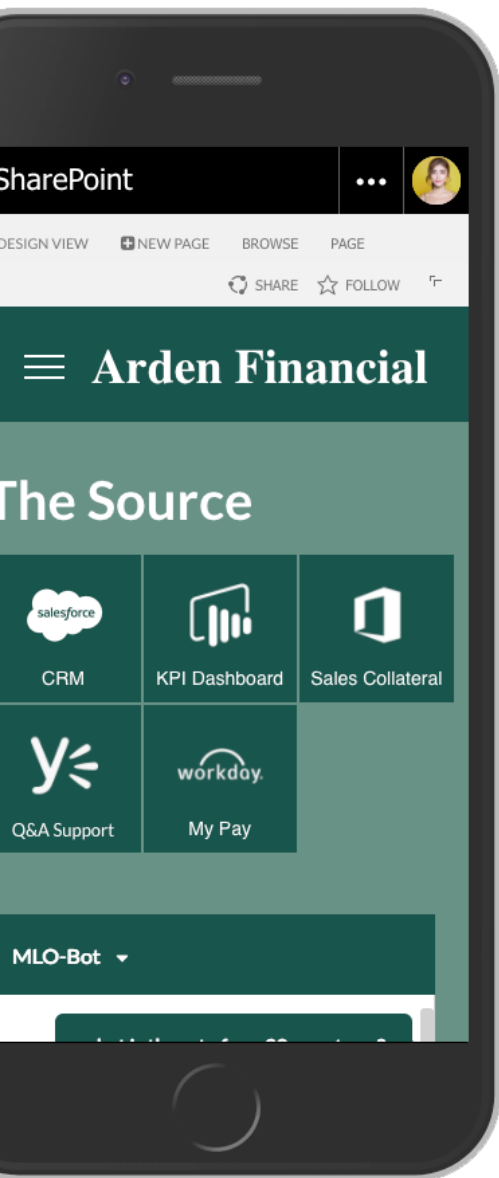

About LiveTiles Design

Creating a shared resource for collaboration online that can incorporate both new technology and legacy systems is critical to significantly increase productivity and save time for any business over the long run.

But developing an intelligent workplace that meets your needs today and remains relevant as business needs change can be time-consuming and expensive. This is where LiveTiles comes in.

The LiveTiles Design product suite forms an interface layer over Microsoft Office 365, SharePoint, or Azure that provides the tools users need to easily design and build intelligent workplaces that place their legacy, current, and future technological investments into a single pane of glass.

About LiveTiles MX

LiveTiles MX is a paid extension of the core LiveTiles Design page-building platform, which captures LiveTiles Design-built pages into a customized mobile app that employees can access from an iOS or Android device. All this without the time, cost, and risks associated with customized cross-platform app development.

MX creates an even further mobile-optimized experience connecting employees to the information they need – delivered on top of your existing investment in Microsoft Office 365 or in Azure.

So why is this valuable?

TRULY MOBILE USER EXPERIENCE

Avoid a cumbersome mobile browser login by accessing pages through a separate mobile app.

TAILORED MOBILE VIEWS

Provide experiences tailored to your mobile users' needs by selecting specific LiveTiles-built pages to appear in the app.

STREAMLINED APP UPDATES

To update the app, simply update your LiveTiles pages and let the app do the rest. No need to make the same changes twice.
