

LiveTiles for SAP

About LiveTiles Design

Creating a shared resource for collaboration online that can incorporate both new technology and legacy systems is critical to significantly increase productivity and save time for any business over the long run.

But developing an intelligent workplace that meets your needs today and remains relevant as business needs change can be time-consuming and expensive. This is where LiveTiles comes in.

The LiveTiles Design product suite forms an interface layer over Microsoft Office 365, SharePoint, or Azure that provides the tools users need to easily design and build intelligent workplaces that place their legacy, current, and future technological investments into a single pane of glass.

About LiveTiles for SAP

LiveTiles for SAP is a paid extension to the core LiveTiles Design products. It enables LiveTiles designers to integrate and surface content from their existing SAP software tools within LiveTiles intelligent workplaces.

So why is this valuable?

BRIDGE SILOS

Allow users to access core SAP routines from LiveTiles pages, leveraging both tech investments from a single interface. Tile interactions include updating address information, approving purchase orders, requesting leave, and many more.

SINGLE ACCESS POINT

Significantly quicker and lower cost to deploy than a custom-developed connection between your Microsoft environment and SAP Gateway.
